

Continue with the previous assignment(Week\_29\_Day\_5\_Assignment),

Add redux & react-redux to the application.

Then you need to perform below actions:

1. On login, store the user data in redux.
2. After login, User can navigate to “Todo page” and can perform below actions:
  - a. Add
  - b. Delete
  - c. Edit
  - d. List

**\*Note:** As now two set of information is to be stored in redux so there will be 2 reducers & you need to combine the reducers.
