

Make a JavaScript function such that you can specify the number and the elements must be appended inside the parent container.

Example: `<div class="parent"></div>`

```
function putElement(n) {  
    ...your code  
}
```

`putElement(2)`

New HTML:

```
<div class="parent">  
    <div class="child"></div>  
    <div class="child"></div>  
</div>
```
