

Make a simple JS file and setup redux.
(npm install --save redux)

Perform the below actions:

1. Increment
2. Decrement
3. Every time increment or decrement happens store those values in array.

```
Const initialState = {  
  Counter: 0,  
  TrackChanges: []  
}
```

“Counter” key will be incremented or decremented and you’ll be storing all the history in
“TrackChanges” key
