

Given two binary trees, write a function to check if they are the same or not.

Two binary trees are considered the same if they are structurally identical and the nodes have the same value.

Example 1:

```
Input:      1      1
           / \    / \
          2  3   2  3

        [1,2,3], [1,2,3]
```

Output: true

Example 2:

```
Input:      1      1
           /      \
          2         2

        [1,2],   [1,null,2]
```

Output: false

Example 3:

```
Input:      1      1
           / \    / \
          2  1   1  2

        [1,2,1], [1,1,2]
```

Output: false
